RACING IGNITIONS

FTZ BATTERY-FIRED RACING IGNITION

This is the latest version of our all out race ignition for drag racers and hill shooters. This new generation digital ignition is programmed in-house to make optimum power at every RPM. No more wimpy stock ignitions with timing advancers that help at only one RPM. Increased low-

end, midrange and top-end are all gained lowering times and gaining speed.

Tremendously hot multiple sparks gives awesome throttle response for instant power and is just the thing for running alcohol. Super light weight flywheel rotor (only 5 ozs!) increases acceleration even more. This ignition is powered by a small 12 volt battery, which will have to be mounted in your bike.

A full battery charge is good for many runs before recharging. This is obviously not for trail riding, motocross and other extended rides.

Full Race Ignition w/ switch- Includes: Digital Control Box with wiring, Hi-Output Coil and Spiral Wound Plug Wire, Rotor, Trigger Coil,

Timing Plate and Waterproof Kill Switch. 2006 Prices:

For Honda 250R.....\$675

For Banshee.....\$775
